LOOKING TO THE FUTURE

Environmental responsibility has been engrained in Bertch's corporate philosophy since its inception in 1977.

ModernView by Bertch is certified and recertified by KCMA's Environmental Stewardship Program (approved by NAHB) annually. It is Bertch's goal to not just meet the ESP requirements, but exceed them.

As a fully integrated US manufacturer, we produce our own components. Limited outsourcing combined with backhauling our own materials greatly reduces emissions as well as using an eco-friendly finishing technology. Formaldehyde-free adhesives and optimizer technology are elements of our environmental program. Sawdust has been regenerated for over 30 years to produce both heat and electricity.

We employ a solvent recycling program, which allows solvents to be used over and over again as a cleaner without having to dispose of the materials. Bertch associates have planted thousands of trees since 1977 and will continue to plant more.

Made in the USA
